

FEATURES

- <-1db insertion loss to 6.4GHz
- <2:1VSWR to 5.6GHz
- 28g operating spring force
- $Z_0 = 33.1\Omega$
- <40.5ps risetime
- 80milliOhms contact resistance
- 2.6A max drive current

GENERAL DESCRIPTION

The B2500 series spring probes from Signal Integrity Inc. are designed to meet the rigorous test requirements driven by the fast risetimes and increased need for RF and wireless bandwidth in the high volume, very fine pitch test socket market. Along with speed and accuracy, these probes are designed to operate at pitches down to 0.5mm, specifically tailored to the ultra fine packaging these markets demand.

The high bandwidth of these probes provides very low insertion loss up to 6.4GHz. These probes will provide transparent operation on Bluetooth, 802.11b and 3G wireless protocol devices and exceed the test probe requirements for fine pitch SOC devices, ASIC devices, microwave communications devices and system interconnects.

With an impulse risetime of less than 40.5ps and a propagation delay of 39ps, the B2500 Series is designed for building transparent test channels or interconnect solutions that must address the signal performance needed in data communications and source synchronous memory busses up to 5Gb/s.
